

**UVN**

**In the year 2004, UVN Prague received the international accreditation JCI (Joint Commission International).**

**UVN Prague thus became the first hospital in the Czech Republic – as well as in Middle and Eastern Europe – that was granted this certificate of international accreditation.**

**The prerequisite to receive this accreditation is the maximal possible quality care and security for patients. The certificate is valid only for three years. The re-accreditation process passed off in 2007 and UVN Prague received JCI Accreditation for a second time.**

**THE PROGRAMME OF  
ONCOLOGY  
PREVENTION**

## THE PROGRAMME OF ONCOLOGY PREVENTION

For those clients who decided to make an investment in their health, UVN Prague prepared

### THE PROGRAMME OF ONCOLOGY PREVENTION

Timely identification of malignant tumour can save your life. Modern diagnostic methods are able to detect a tumour in its early stage, when there is a great chance to be cured. The responsible attitude towards our health could lead us to medical doctors', sooner than we could feel first symptoms of disease. If our examination is negative, we shall not be scared. On the contrary, if the tumour is detected in time, there are great chances to be recovered.

#### The programme includes:

- clinical examination, including detailed anamnesis
- analysis of blood sample
- X-ray picture, to exclude lung tumours
- endoscopy of upper parts of digestive tract to exclude throat or stomach tumours
- colonoscopy – endoscopic examination of rectum and colon, including reasonable laboratory tests, and the preparation for this examination – to exclude tumours of large intestine and rectum, endoscopic examination of large intestine by means of optical probe introduced into a colon is replaced by the special capsule with a microscopic camera, monitoring an intestinal lumen; collected data are recorded into a computer to be processed and evaluated
- mammography and sonography screening of women breasts – to exclude breast tumour
- gynaecology examination and sonography of lesser pelvis – to exclude gynaecologic tumours
- sonography of prostate gland
- dermatology examination – for the prevention of skin melanoblast
- sonography examination of abdominal cavity to check the liver, gall bladder, pancreas, kidney – to exclude tumours in this area

#### Pre-arranged appointments:

- 1st day – laboratory, X-ray; arrangement of further examinations: colonoscopy, including preparation for it; endoscopy, abdomen sonography, gynaecology, breasts sonography, mammography and dermatology
- evaluation of all examinations, instructions, further recommendations
- in case of positive findings, further treatment is paid by health insurance company

#### The cost of programme:

- male patients: 12,000.- CZK; capsule endoscopy: 31,000.- CZK
- female patients: 14,000.- CZK; capsule endoscopy: 33,000.- CZK

Tumour diseases – statistics says that in the Czech Republic, there are a total of 28,000 increases in tumours. International health organisations allege that every third man suffers from cancer and every fourth die of it.

The successfulness of treatment depends on timely diagnosis of this disease.
